

CONTENTS

The Official Review Journal of the American College of Sports Medicine

VOLUME 38 | NUMBER 3 | JULY 2010

Commentaries to Accompany

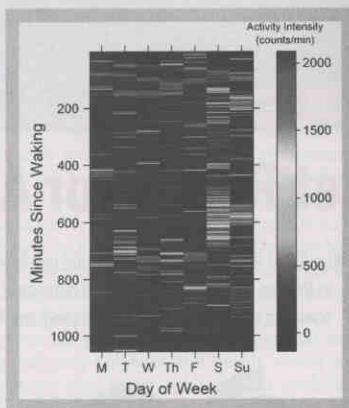

- 101 Medical Hazards of Prolonged Sitting
David R. Bassett, Jr., Patty Freedson, and Sarah Kozey
- 103 Why Doesn't Weight Gain Blunt Appetite and Increase Movement? Nonhomeostatic Responses to Energy Surplus in Humans
Barry Braun

Perspectives for Progress

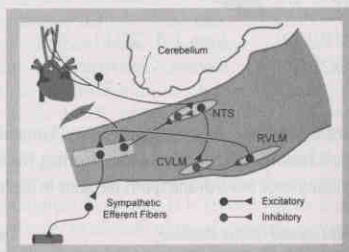

- 105 Too Much Sitting: The Population Health Science of Sedentary Behavior
Neville Owen, Geneviève N. Healy, Charles E. Matthews, and David W. Dunstan
Prolonged, unbroken sitting time is related adversely to cardio-metabolic health, and to premature all-cause and cardiovascular mortality.

Articles

- 114 Nonhomeostatic Control of Human Appetite and Physical Activity in Regulation of Energy Balance
Katarina T. Borer
Ghrelin and leptin do not control human appetite and meal-to-meal eating but track changes in energy availability.
- CLUB**
- 122 Postexercise Hypotension: Central Mechanisms
Chao-Yin Chen and Ann C. Bonham
Our studies suggest that exercise-induced neuroplasticity in the nucleus tractus solitarius and rostral ventral lateral medulla contributes to postexercise hypotension.
- 128 Epimuscular Myofascial Force Transmission Implies Novel Principles for Muscular Mechanics
Can A. Yucesoy
The key aspects, determinants, and effects of epimuscular myofascial force transmission on muscular mechanics are reviewed.
- 135 Excitation-Contraction Coupling and Minor Triadic Proteins in Low-Frequency Fatigue
Edward M. Balog
Low-frequency fatigue uncouples excitation from sarcoplasmic reticulum calcium release. A role for minor triadic proteins is proposed.
- 143 Ankle Sprains: Getting Off on the Wrong Foot
Jacques Duysens and Oron Levin
A paradigm shift is needed away from static-local reflexes to the study of dynamic-global responses associated with ankle inversion.
